

Red Cape Honeysuckle

Tecomaria capensis

Height: 16 feet

Spread: 8 feet

Sunlight: ☉ ●

Hardiness Zone: 9

Other Names: syn. *Tecoma capensis*, Cape Honeysuckle

Description:

A striking variety, producing clusters of showy, red-orange trumpet flowers through fall and winter; a stunning landscape or garden accent; plant in sun or light shade, needs little water; can be sheared for use as a screen or hedge

Ornamental Features

Red Cape Honeysuckle features showy clusters of lightly-scented red trumpet-shaped flowers with orange overtones along the branches from mid fall to late winter. It has attractive dark green evergreen foliage. The serrated pointy compound leaves are highly ornamental and remain dark green throughout the winter.

Landscape Attributes

Red Cape Honeysuckle is a multi-stemmed evergreen shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This shrub will require occasional maintenance and upkeep, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting bees, butterflies and hummingbirds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Red Cape Honeysuckle is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use
- Container Planting

Planting & Growing

Red Cape Honeysuckle will grow to be about 16 feet tall at maturity, with a spread of 8 feet. It has a low canopy with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 20 years.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type, but has a definite preference for acidic soils, and is subject to chlorosis (yellowing) of the foliage in alkaline soils, and is able to handle environmental salt. It is somewhat tolerant of urban pollution. This species is not originally from North America.

Red Cape Honeysuckle makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. Its large size and upright habit of growth lend it for use as a solitary accent, or in a composition surrounded by smaller plants around the base and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
